PROFESSIONAL SUMMARY

Detail-oriented Junior Application Developer with hands-on experience building enterprise-level government platforms. Skilled in system testing, debugging, and managing data flows through API integrations. Actively expanding capabilities into data science through the Google Data Analytics track and leveraging AI-assisted development tools to optimize daily workflows. Eager to bring this technical foundation and strong problem-solving mindset to the Graduate Program in Technology & Analytics.

KEY ACHIEVEMENTS

- Achieved an 89.57% overall performance score in Q1 2026, excelling in individual KPI execution (28.50/30) and collaborative competency benchmarks.
- Graduated with Dean's List recognition and GPA 3.67/4.0 in Bachelor of Science (Hons) Netcentric Computing, demonstrating consistent academic performance throughout the programme.
- Actively developing SPAN Mobile Application for Malaysia's national water supply regulatory body (SPAN), supporting service coverage across 11 states and 2 Federal Territories with an estimated reach of over 27 million users.

EXPERIENCE

Junior Executive Application Developer

January 2026 – Present

MAP2U Sdn Bhd | Nilai, Negeri Sembilan

- Developed and maintained frontend and mobile application features using Vue.js and Flutter based on design specifications for government digital platforms.
- Leveraged AI-assisted tools (Claude, GitHub Copilot) to streamline end-to-end debugging, optimize code structure, and accelerate troubleshooting during system testing.
- Participated in internal UAT and FAT review meetings, providing developer input to ensure delivered features met defined acceptance criteria.
- Collaborated in an agile team using Git on GitHub, contributing to code reviews and version control best practices.
- Managed production issue tracking, version control via GitHub, and technical collaboration across agile project teams.

Intern System Developer

September 2025 – December 2025

MAP2U Sdn Bhd | Nilai, Negeri Sembilan

- Assisted in requirements documentation and system testing for government web applications under senior developer guidance.
- Contributed to UI implementation and supported end-to-end testing and enhancement tasks within an Agile team.

PROJECTS

Kampung Digital Melaka 2.0 System

- Developed and maintained a responsive property and premise management system for a government digitalization initiative.
- Integrated RESTful APIs using Axios, enabling seamless data flow between frontend and backend systems.
- Engineered advanced data tables with sorting, filtering, and pagination, improving data accessibility and user efficiency.
- Independently developed a self-service complaint tracking module, implementing input validation for reference numbers and a dynamic UI to display real-time status updates and admin remarks.
- Built dynamic forms and search features to streamline data entry and retrieval processes.
- Contributed to software modules that successfully passed rigid User Acceptance Testing (UAT) within strict project timelines.

SPAN Mobile Application System *(In Progress)*

- Developing a cross-platform mobile application for Malaysia's national water supply and sewerage regulatory body.
- Designing and implementing responsive, user-centric UI layouts using Flutter and Material Design principles.
- Building reusable widgets and scalable state management structures to maintain clean code architecture.
- Collaborating in an agile development environment, contributing to ongoing feature updates for a platform serving an estimated 27 million users.

CampusCruise — Campus Ridesharing & E-Hailing System

Academic Project | Web Engineering, UiTM Shah Alam

- Led a group project as Project Manager, coordinating team tasks, stakeholder communication, and documentation quality throughout the project lifecycle.
- Conducted real stakeholder interviews with industry and academic representatives to gather and validate system requirements for a campus transportation solution.
- Produced a Rapid Application Development (RAD) document covering problem analysis, proposed system design, UI prototyping, and testing evaluation.
- Designed system prototypes using Figma, presenting a complete proposed solution that received formal stakeholder sign-off approval.
- Achieved the highest mark in the cohort for this assignment.

EDUCATION

Bachelor of Science Computer (Honours) in Netcentric Computing

October 2022 – February 2026

Universiti Teknologi Mara (UiTM) | Shah Alam, Malaysia | GPA: 3.67/4.0 | Dean's List |
Expected Graduation: November 2026

SKILLS

Methodologies & Tools: Requirement Gathering | System Documentation (SRS) | Process Mapping (Use Cases/DFDs) | SDLC | UAT Support | Agile | GitHub | Git | Figma

Technical: HTML | CSS | JavaScript | Vue.js | Dart | Node.js | PHP | Flutter | Tailwind CSS | Laravel | MySQL | RESTful API | AWS (foundational)

AI-Assisted Development: Claude | GitHub Copilot

CERTIFICATIONS

- AWS Bootcamp — Iverson Workshop
- Cisco Introduction to IoT — Cisco Networking Academy
- Google Cybersecurity Professional Certificate — Coursera
- Girl CTF — Cybersecurity Competition Participant

LANGUAGES

- Malay — Native
- English — Advanced
